

## BAITING A WILD PIG TRAP TRIP WIRE TRIGGER

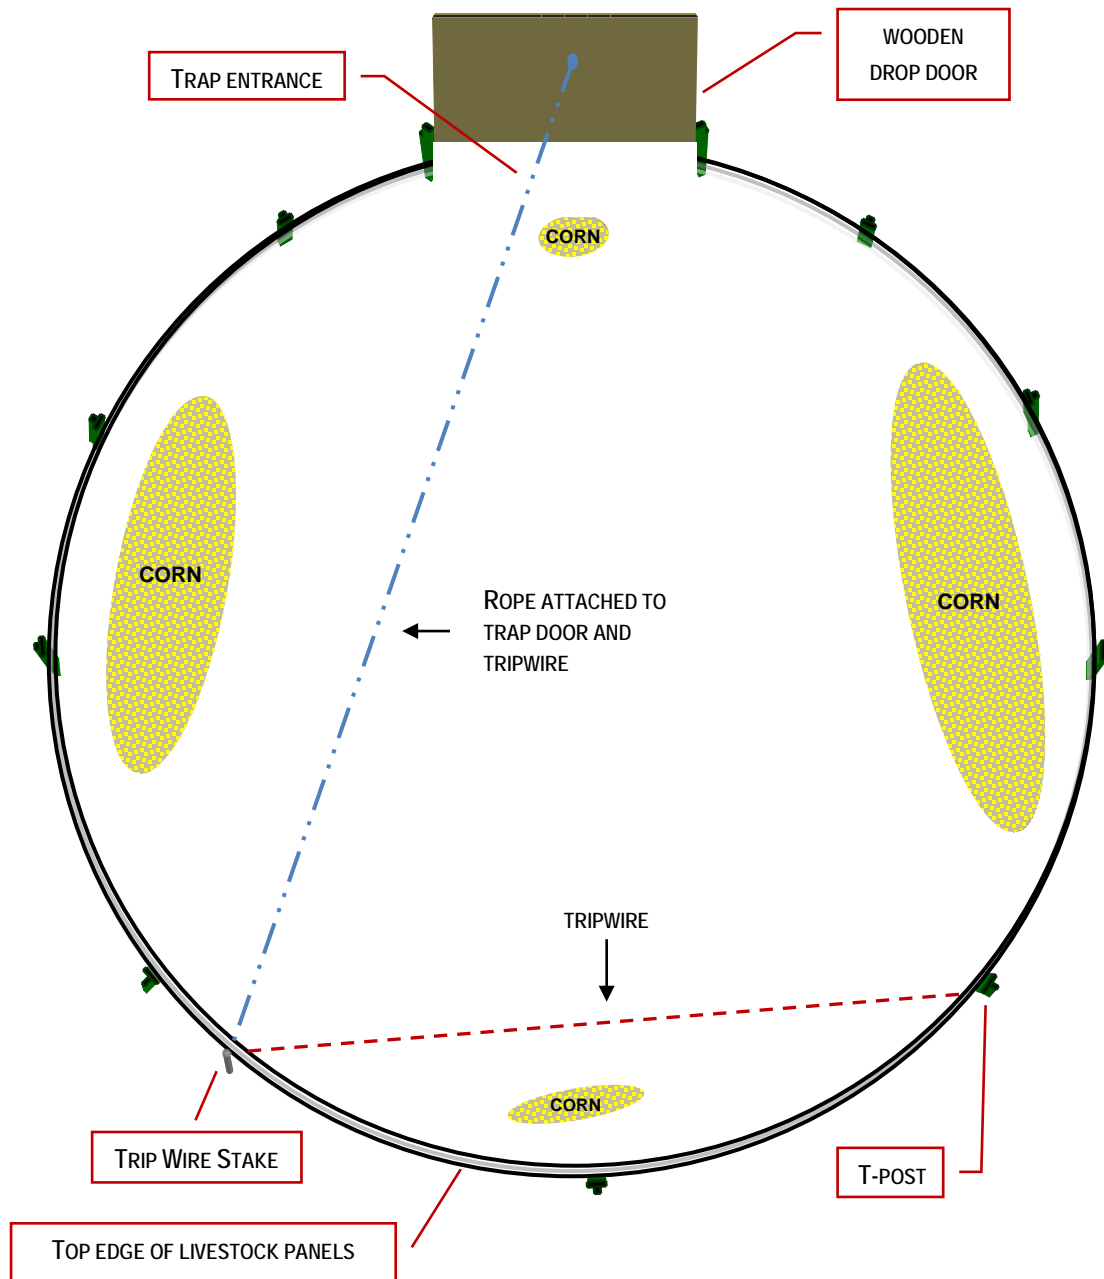

Illustration By: Bill Hamrick, Mississippi State University Extension Service

**Figure 2:** Bird's eye view of a corral trap demonstrating bait placement for trapping wild pigs. Place only a small amount of bait (corn) inside the door and only  $\frac{1}{2}$  to 1 gallon of corn behind the trigger (tripwire). A 5-gallon bucket of corn is sufficient for baiting a 3- to 5-panel trap.
